Skills	Languages: Python, Go, Java Frameworks: gRPC, Flask, React, Bulma Tools: bash, vim, git, Mongo, L ^A T _E X	
Experience	<p>Software Engineer August 2021 - present Plaid > Internal Platform > Core Services > Abstractions</p> <p>Prioritized correctness, reliability, and velocity in data modeling and storage for core systems in Go. + Owned project to resolve scaling limit, extending company storage runway from 2022Q1 to late 2020's + Designed and built verification to help detect and manage 100MM's of obsolete user connections + Led component efforts for infrastructure cost reduction (\$45k/mo) and incident response speedup</p> <p>Software Engineer June 2019 - July 2021 Google > Tech Infra > Unified Fulfillment Optimization > Fleet Transformation</p> <p>Enhanced Java backend for mixed-integer programming solver microservice to plan datacenters, focused on reducing lead time variance and increasing planning granularity and touchless automation. + Launched recurring automated jobs to detect and re-plan no-longer-viable solutions. + Designed and delivered API to plan with counterfactuals, increasing on-time fulfillment and reducing need for manual intervention for planning-time changes and execution-time obstacles.</p> <p>Software Development Engineer Intern May - August 2018 Amazon > Supply Chain Optimization Technologies > Topline Forecasting</p> <p>Investigated and implemented serverless solutions to reduce forecasting compute costs by 10-100x. + Designed and implemented Python workflow orchestrator to operate serverless forecasting on AWS. + Generated 150+ pages of documentation covering several viable serverless architecture options.</p> <p>Software Development Engineer Intern May - August 2017 Amazon > Worldwide Operations > Robotics</p> <p>Validated deep reinforcement learning for visual navigation in sidewalk delivery (Amazon Scout). + Drove effort to generate training data from realistic commercial virtual 3D environments. + Built simulation and testing environment for Nav A3C visual navigation agent.</p>	
Education	<p>Carnegie Mellon University May 2019 Bachelor of Science, Electrical and Computer Engineering</p> <p>Coursework: Advanced Mobile Robot Development (16-865), Advanced Digital Signal Processing (18-792), Introduction to Machine Learning (10-601), Rapid Prototyping of Computer Systems (18-540), Introduction to Computer Architecture (18-447), Natural Language Processing (11-411), Neural Technology: Sensing & Stimulation (18-412), Logic Design and Verification (18-341)</p> <p>Involvements: hackathons (competitor, mentor, organizer, and sponsor), Mock Trial (Captain), SDC Buggy (carbon-fiber gravity racing; Mechanic), End The Rain (umbrella dispensers; Co-Founder, Tech Lead)</p>	
Projects	<p>Nemosi (18-540 Class Capstone) January - May 2019 Chief Architect, Wireless Networking Lead</p> <p>Drove architecture and wireless networking design for prototype system to help Alzheimer's patients.</p> <p>SCOT-T Lunar Rover (16-865 / CMU+Astrobotic Lunar X Prize Project) January - May 2016 Engineer on Communications, Hardware, and UI Teams</p> <p>Worked on development and testing of UDP-based communications for novel 4.5kg Cube Rover standard.</p> <p>FifthSense (PennApps Fall 2015 Grand Prize) September 6-8, 2015 Hackathon Competitor</p> <p>Built full-duplex handheld device to allow blind users to access smartphones in mobile contexts.</p>
